Syntax – Chomsky

By Shomit Sirohi

Introduction
By Noam Chomsky

I keep working on this syntax – this I call basics, life and help, even

happiness
because of Sirohi
– but I mean now
we live well – it is
just about being
truly educated,
you see that
Nishida aspect of
true education
and an inquiry
into how to be
Good – I agree,

and you can add that victory for all of us, especially black philosophers, intellectuals, women joining us.

Premise – Linguistics

A Beginning of any kind –

If you say I have a problem in life

Why – (one way)

Answered with logic

It works

For myself

I can handle it, I answer it, it remains sometimes,

For illogical reasons therefore – some joke I call it

A joking blooming
buzzing
confusion,

Like Zhuang Zhi,

Saying it will
work out,

So just move on,

Everything is
answered finally
by how genius
you would get if
this continued,

As that is how the
steep trouble, is
handled,

And is made like a
answer to steep
trouble,

Which is logical,
That indents it,

And forms a acute
genius at each
point.

Like right now I become a philologist and deep intelligence.

II.

Hello,

Answered by

Yes, hello

And then
conversation is
made,

And politeness
shared,

Now beyond that

A intelligent
person

Makes intellectual conversation,

Most people would be a mix up for me,

I meet only intellectuals.

Now dramatize this behaviour – it just proceeds intellectually life.

I call this genius,

Just be an intellectual and keep working.

III. Analysing two logics compared

One is about problems in life and its answers and even genius, and philosophical or intellectual behaviour, even creative behaviour at

times of true creativity it becomes.

Another is just a intellectual paid wage work at a office

It would be fulfilling to work

as an intellectual and keep it published and engaged.

Now from another standpoint – intellectual life is working out and is also intellectually working out – like

working on intellectual life.

So another example is the standard philosopher

Always philosophy ridden and always about working out philosophy

Now he meets no-one because he is strictly about philosophy and philosophers.

Looking for a great in fact work wage life.

And that is hard to come by, with them – not working like in an office,

Because that goes alienation-philosophy and anxiety.

Deterior solves
my life,

Gratitude to
Sirohi, that’s what
life meant – again
philosophically.

Deep genius at
work now,

Just philosophy
but fulfilling
finally.

III.

Women are just in
love with me,

For solving their
lives,

Crises, all types of confusions, and looking to be highly educated, but with some high levels

A teacher and loving kindness

Also in a lot of trouble with bad people.

Solved as well,

A man who is also in fact highly creative and artistic,

Sublime conversations,

Now love is here.

And we are just utopian about the solving and the teaching, and the creative language.

A swerve acting, the star of redemption out then.

That’s our quiescence in fact, you can tell.

We are about Israel, and that style if it is with

real thinking, and philosophy.

But also art. And the mix ups. Should I floor you or talk normally – like a flirtatious daily life in love.

We mean no mix up – you are hot and I am hot.

IV. Analysing logic

Normal women,

Just in search of the one man,

The opposite of
the above,

A true lover,
Struggling,

Working hard,

Religious.

VI. Mathematical Syntax in Linguistics

Premise – Self-Evident

1.1.

Types of people – strict, distinct, and relatable

even different experiences of life

2.2

It means two ways of living life, or two things, even two or three things about it.

Steps – 1.1. A person is self evident

2.2. there are a few things about the person

3.3 Directly confused and worse off, for some reason –

many language games then, but actually lived experiences.

4. 4 Together, community, even black rights and Judaism, theology, the poorest and logical capitalists even – a world of

people respected for who they are and worked for in a engaging manner.

So conclude in syntax –

Keep working on intellectual life, solving it and

being genius – people just work together, live together nowadays – it means just that type of a person – who will work on matters which is like a statesman, if too engaged, actually like a

common intellectual working – best option

But it has to work – deduction – a really engaged working person on this how it was achieved fact –

American Idealism recently.

Two ways then – intellectuals who really work for the world and each other. Appointing them, working on office life or such options.

Or in fact a young man who does this in perfect analysis and is really understanding and really personal – but as a philosopher, intellectual and lover, even of

theology or many types of people – a person who is a authentic philosopher.

VI. Further – what is syntax

1, 2, 3, 4.

And basics just that is education – just though in a way – so either a stereotypical freak out of a intellectual or a man who is occaissoned and rises up to the task.

Clarifying this – Basic education and militant about that but with a twist which is personal.

It means then, 1,2,3,4 with twists or swerves.

Which I call,

1,2,3,4 and Advanced with Basics, and 1.1, 2.2, 3.3, 4.4 – a bit like Chopin and lyrical.
